

Data as a Service (DaaS)

Overview

Canary Systems® Data as a Service (DaaS) solution is a comprehensive cloud based solution for data collection, presentation and analysis via MLWeb. Supporting a wide range of data import options including direct logger connection, Canary Systems DaaS takes the hassle out of deploying and maintaining servers, dealing with limited IT resources, and managing access and security; while at the same time allowing for easier access to data for personnel, management, external service providers or regulators.

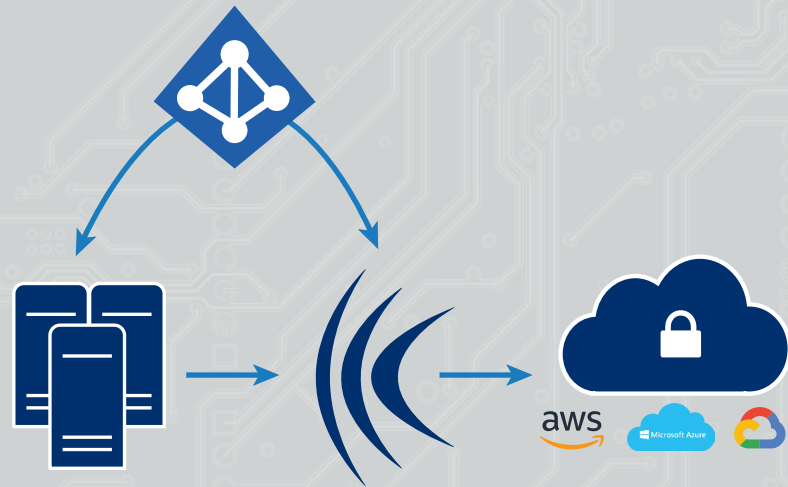

Cloud Environment

Canary Systems DaaS offers **public and private cloud** and colocation environments through our partners Colocation America and Estruxture Canada, backed by major cloud architecture from Amazon AWS™, Google Cloud™ and Microsoft Azure™.

Security & User Management

Native SQL and .NET technologies - not open source PHP - provide granular access control down to individual data instruments at 5 preconfigured user role levels. **Single-Sign-On** is supported through the Microsoft Azure AD platform.

Canary Systems DaaS services are not created by, affiliated with, or supported by Google Inc., Microsoft Corporation, or Amazon.com, Inc. Google Cloud is a trademark of Google LLC. Microsoft Azure is a trademark of Microsoft Corporation. Amazon Web Services and the AWS logo are trademarks of Amazon.com, Inc.

 **SECURE ACCESS**

 **SCALABLE CLOUD**

 **MAINTENANCE FREE**

Data Imports

Seamless data imports are possible from a variety of sources, including:

- hot folder transfers (SFTP or SSH)
- **direct logger connections** (through public | private IP addresses)
- web data access through scripting
- direct database connections (e.g. SQL and OPC)
- web based data entry
- web based file uploads

Cost Options

Canary Systems DaaS offers two main cost scenarios - with and without the upfront purchase of the software. In both scenarios, the cost is based on recurring hosting fees (min. \$250/month) and the Support Level* (default Bronze Support). In the no-purchase plan, any required licensing is rolled into the hosting fee. In either instance, the initial deployment is billed separately, either as lump sum or as "time and materials".

Additional Services

DaaS comes with the Bronze Support Plan* as the standard service level. Additional services such as project support (aka Silver or Gold Support plans), database work, hardware installation and maintenance can be purchased additionally. The cost is rolled into the hosting fee (monthly, quarterly, or annual).

*For additional information on the various levels of Canary Systems Support Plans, please refer to our website or Support Data Sheet.
